Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/821,131

Applicant(s)

EARNEST, ROBERT D.

Examiner

Marc A. Patterson

Art Unit

1772

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 and 22-30 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-17 and 22-30 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 7/16/04.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 – 16, 22 – 28 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Guckert et al (U.S. Patent Publication 2002/0003004 A1).

With regard to Claims 1 – 4, Guckert et al disclose a vessel which is a tube or cylinder (paragraph 0039) which is thermally insulated (paragraph 0038) comprising a body of polymeric material defining the vessel (polyacrylonitrile; paragraph 0038) and a body of a non – woven fabric (non – woven material; paragraph 0038) which is inserted into layers of the vessel (paragraph 0038); the layers comprise the polymeric material (paragraph 0024) and is therefore embedded in the polymeric material; the ends of the layers are exposed upon a surface of the vessel as shown in Figure 1 (end face; paragraph 0034); the fabric is therefore partially embedded in the polymeric material; the fabric comprises polyacrylonitrile (paragraph 0038), which are filaments (threads; paragraph 0023) which are carbonized (paragraph 0023) and is therefore a refractory fabric which also provides acoustic insulation.

With regard to Claim 5, the body of refractory fabric has a thickness in the range of 1 – 50 millimeters (paragraph 0037).

Art Unit: 1772

With regard to Claims 6 – 7, the body of polymeric material is a tube, and is therefore a duct, as stated above, and is configured to retain a fluid or direct a stream of gaseous fluid (hot gas; paragraph 0022).

With regard to Claims 8 and 11, the fabric disclosed by Guckert et al comprises a laminate of fabric layers (paragraph 0040); fabric is therefore disposed upon an exterior surface of the duct and an interior surface of the duct to be in contact with a stream of gaseous fluid.

With regard to Claims 9 – 10, the body of polymeric material is a tube, and is therefore a duct, as stated above, and is therefore configured to retain a liquid, thereby defining a tank.

With regard to Claim 12, the body of polymeric material is a tube, and is therefore a conduit, as stated above, and is therefore configured to retain a communication line therein.

With regard to Claims 13 – 14 and 22 – 24, Guckert et al discloses the interchangeability of textiles and foil in the making of the vessel (paragraph 0034) and discloses a metallic foil (paragraph 0039) and therefore disclose a layer of metallic material, which is a foil, disposed atop a surface of the exposed body of the refractory fabric.

With regard to Claims 15 – 16 and 25 – 28, Guckert et al disclose a metal comprising an aluminum – based material (paragraph 0038) and therefore discloses a woven material or foil which is an aluminum based material.

Art Unit: 1772

With regard to Claim 30, Guckert et al disclose the use of graphite fibers for the purpose of preventing distortion (paragraph 0035) and therefore disclose reinforcement material interposed between the layer of refractory fabric and metallic material.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 17, 29 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guckert et al (U.S. Patent Publication 2002/0003004 A1) in view of Kraik (U.S. Patent No. 5,485,870).

Guckert et al disclose a tube for a fluid comprising a layers of fabric, therefore adhesively bonded, as discussed above. With regard to Claims 17, 29 and 31, Guckert et al fail to disclose a fabric comprising glass fiber material.

Kraik teaches the use of glass fiber material (fiberglass; column 3, lines 32 – 45) in a tube for a fluid (hose; column 1, lines 4 – 10) for the purpose of obtaining a tube which transmits under high pressure (column 1, lines 4 – 10). One of ordinary skill in the art would therefore have recognized the advantage of providing for the glass fiber material of Kraik in Guckert et al, which comprises a tube for a fluid, depending on the desired pressure of transmission of the end product.

Art Unit: 1772

It therefore would have been obvious for one of ordinary skill in the art at the time Applicant's invention was made to have provided for a glass fiber material in Guckert et al in order to obtain a tube which transmits under high pressure as taught by Kraik.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc A Patterson whose telephone number is 571-272-1497. The examiner can normally be reached on Mon - Fri 8:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
